We want to earn your business. If you get a lower quote, send it to us and we will try to beat it.

Please review this quote for accuracy prior to order

- We have priced and estimated a delivery window for your job based on the geometry in 3D model you have provided, along with the tolerances, features and secondary operations you have selected during the submission process and which are specifically confirmed by us in this Quote. We do not automatically extract features, tolerances or other non-geometric information from your submitted 3D model, even if represented there (e.g. threads, tapped holes, etc.). Even though our prices are dynamically generated in real time, we will honor the price in this Quote until 22.05.2026 (although the estimated delivery window will be re-calculated at time of actual order placement).

- While we may provide you with design for manufacturing assistance, you are ultimately responsible for the suitability of your design, and associated material selection, for any intended purpose. You may submit one or more engineered drawings and or specification sheets to us. While we will do our best to identify any inconsistencies or conflicts in your materials prior to manufacturing your part, you alone are responsible for any inconsistencies between the materials you provide to us and what is reflected in this Quote.

Sharp internal corners will be machined with 2mm radius unless explicitly requested otherwise.

- Unless specified otherwise, Terms and Conditions of Xometry Europe GmbH apply

- Parts made of rust-prone materials may be coated with oil-based anti-corrosion agent at our discretion. Please inform us if you accept the risk of possible corrosion during transportation and want to receive your parts oil-free
